## EXPERIENCE

In recent years, my journey has led me through creating distinct projects, a blend of personal explorations, and professional client work. I have led several projects from conception to deployment, including an e-commerce platform that improved user engagement by 30%. My experience includes integrating third-party APIs and deploying applications on cloud platforms. Collaboration is at the core of my development process. I work closely with designers, product managers, and other developers to understand project requirements and translate them into functional, high-quality code.

## FEATURE PROJECT

### Organic Store (E-commerce website)

**Used Technologies:** HTML CSS JavaScript React js Tailwind CSS Firebase React Router

#### Features:

- User Authentication
- Private Route
- Interactive Carousel
- Product Search
- Store data in local storage
